GK General Insurance

Claims Narrative Compilation

Selected Property & Motor Cases · Fiscal Year 2025

Period of Loss:	*01 January 2025 – 30 November 2025*
Lines:	*Personal Property, Commercial Property, Motor*
Compilation Type:	*Curated Narrative Sample — Internal Review Use*
Prepared By:	*Claims Operations · GKGI Head Office*
Compilation Date:	*18 December 2025*
Classification:	*Internal — Restricted; Pseudonymized*

NOTE TO READER. *The narratives in this compilation are summary write-ups by the assigned adjusters and senior adjusters, prepared for internal review. They reflect the state of each file at the date of compilation and may not reflect subsequent activity. Customer and policyholder identifiers have been pseudonymized. Settlement amounts are presented in Jamaican Dollars (JMD) unless otherwise stated.*

Foreword — Reading these narratives

A claims narrative is the human voice inside a structured claims process. The structured side — policy number, peril code, settlement amount, days-to-close — appears in the metadata block at the top of each case. The narrative itself is what the assigned adjuster wrote in their own words after working the file. It contains chronology, judgment calls, and information that rarely makes it into a dashboard.

For executive review, three habits will be useful when reading these.

First, read for what the dashboard would not show you. A claims dashboard will tell you that combined ratio is elevated and that average days-to-close has lengthened. It will not tell you that, in a meaningful share of these cases, the original loss event was minor and that the major settlement was driven by secondary damage that occurred while the file was queued for an adjuster visit. That distinction is in the narrative, not the data.

Second, read for tone and repetition. Adjusters writing twenty narratives a week tend to develop shorthand. When several narratives use the same phrase ("compounded by delayed inspection," for example), the language is doing the work of an early-warning indicator.

Third, read for the adjuster's judgment. Adjusters frequently note coverage decisions they considered borderline, settlements they thought were generous or tight, and customer situations that influenced the disposition. These judgment calls are the institutional knowledge that an executive review should be calibrating against.

The compilation includes twenty cases, sampled from the full FY2025 inventory of approximately 4,200 closed and active files. The sample is weighted toward the post-Hurricane Melissa surge because that is where the most material observations lie — but routine, non-catastrophe cases are included for comparison.

Section 1 — Routine Baseline Cases (Q1 2025)

These five cases are typical of pre-event claims activity and provide a baseline for the narratives that follow. Adjuster commentary is brief because the files are straightforward.

CASE FILE — CL-2025-001142

Personal motor — single-vehicle collision — Kingston, Jamaica

CLAIM ID	CL-2025-001142	POLICY	GKGI-MTR-00558821
DATE OF LOSS	08 January 2025	DATE REPORTED	08 January 2025 (same day)
PERIL	Single-vehicle collision	LINE	Personal Motor — Comprehensive
LOCATION	Hope Road, St. Andrew	ASSIGNED ADJUSTER	M. Bennett (Senior)
INITIAL RESERVE	JMD 850,000	STATUS	Closed — 24 days
FINAL SETTLEMENT	JMD 762,400	INSPECTION DATE	09 January 2025

Narrative Summary

Insured was traveling east on Hope Road at approximately 6:40 AM when the vehicle struck a roadside median, causing front-end damage and deployment of the driver-side airbag. Insured reported the loss the same morning. Inspection conducted next-day at the authorized panel beater. Damage consistent with reported circumstances.

No third party involvement. No injuries reported. Insured cooperative throughout the file. Repair estimate received within seven days; settlement processed within standard SLA.

Adjuster Assessment

Routine collision claim, no coverage issues, no fraud indicators. File closed within standard cycle.

Disposition

Settled at JMD 762,400 (estimate less excess). File closed 01 February 2025.

CASE FILE — CL-2025-001488

Personal property — water damage — St. Catherine

CLAIM ID	CL-2025-001488	POLICY	GKGI-PROP-00102488
DATE OF LOSS	14 February 2025	DATE REPORTED	15 February 2025
PERIL	Burst pipe (sudden & accidental)	LINE	Personal Property
LOCATION	Spanish Town, St. Catherine	ASSIGNED ADJUSTER	D. Reid

INITIAL RESERVE	JMD 240,000	**STATUS**	Closed — 31 days
FINAL SETTLEMENT	JMD 218,500	**INSPECTION DATE**	17 February 2025

Narrative Summary

Insured reported a burst pipe in the kitchen wall affecting flooring and lower cabinetry. Inspection within two business days. Damage consistent with reported circumstances; pipe was visibly compromised at the joint, likely due to age. Mitigation actions taken by insured prior to inspection — water shut off, affected area dried — were appropriate and limited the loss.

Adjuster Assessment

Coverage clear under sudden and accidental water damage provision. Insured took prompt mitigation action. No subrogation opportunity.

Disposition

Settled at JMD 218,500. File closed 17 March 2025.

CASE FILE — CL-2025-001902

Commercial motor — fleet vehicle theft — Montego Bay

CLAIM ID	CL-2025-001902	**POLICY**	GKGI-MTRC-00488122
DATE OF LOSS	22 February 2025	**DATE REPORTED**	23 February 2025
PERIL	Theft of vehicle	**LINE**	Commercial Motor (Fleet)
LOCATION	Sangster International, St. James	**ASSIGNED ADJUSTER**	P. Forbes (Senior)
INITIAL RESERVE	JMD 4,200,000	**STATUS**	Closed — 47 days
FINAL SETTLEMENT	JMD 3,840,000	**INSPECTION DATE**	N/A

Narrative Summary

Insured corporate policyholder reported a 2022 Toyota Hilux missing from the airport employee parking area. Police report filed by insured representative. Vehicle was not recovered within the 28-day waiting period. Settlement based on agreed value provision.

No anomalies in the file. Insured's fleet has historically clean loss experience.

Disposition

Settled at JMD 3,840,000 (agreed value less excess). File closed 10 April 2025.

CASE FILE — CL-2025-002211

Personal property — fire — Manchester

CLAIM ID	CL-2025-002211	**POLICY**	GKGI-PROP-00298401
DATE OF LOSS	07 March 2025	**DATE REPORTED**	07 March 2025
PERIL	Fire — kitchen origin	**LINE**	Personal Property
LOCATION	Mandeville, Manchester	**ASSIGNED ADJUSTER**	M. Bennett (Senior)
INITIAL RESERVE	JMD 1,800,000	**STATUS**	Closed — 38 days
FINAL SETTLEMENT	JMD 1,712,000	**INSPECTION DATE**	08 March 2025

Narrative Summary

Fire originated in the kitchen, contained to the kitchen and adjacent dining area. Cause determined to be unattended cooking. Coverage clear; no exclusion applies for accidental fire.

Insured had recently increased the contents sublimit at renewal. The increase was material to the settlement and is noted here for portfolio review.

Disposition

Settled at JMD 1,712,000 across structure and contents. File closed 14 April 2025.

CASE FILE — CL-2025-002455

Personal motor — third-party liability — Portmore

CLAIM ID	CL-2025-002455	**POLICY**	GKGI-MTR-00611001
DATE OF LOSS	18 March 2025	**DATE REPORTED**	19 March 2025
PERIL	Third-party collision	**LINE**	Personal Motor — Third Party
LOCATION	Portmore, St. Catherine	**ASSIGNED ADJUSTER**	D. Reid
INITIAL RESERVE	JMD 580,000	**STATUS**	Closed — 22 days
FINAL SETTLEMENT	JMD 524,800	**INSPECTION DATE**	20 March 2025

Narrative Summary

Insured rear-ended a stationary vehicle at a traffic light. Liability clear. Third party damage assessed and settled directly. No injury claim.

Disposition

Settled at JMD 524,800. File closed 09 April 2025.

Section 2 — Hurricane Melissa Surge Cases

Hurricane Melissa made landfall on the south coast of Jamaica in late October 2025. The cases in this section reflect direct event-driven losses across the affected parishes. The narratives are presented in the order in which the files were opened. They are written in the voice of the assigned adjusters working under significant volume pressure; some are noticeably more compressed than the baseline cases above.

CASE FILE — CL-2025-008844

Personal property — wind & flood — St. Elizabeth (Melissa)

CLAIM ID	CL-2025-008844	**POLICY**	GKGI-PROP-00455118
DATE OF LOSS	28 October 2025	**DATE REPORTED**	29 October 2025
PERIL	Hurricane — wind and flood	**LINE**	Personal Property — All Risks
LOCATION	Black River, St. Elizabeth	**ASSIGNED ADJUSTER**	P. Forbes (Senior)
INITIAL RESERVE	JMD 2,400,000	**STATUS**	Open — 51 days
CURRENT EXPOSURE	JMD 4,100,000 (revised)	**INSPECTION DATE**	11 November 2025

Narrative Summary

Insured reported significant roof damage and partial flooding from Hurricane Melissa. Initial telephone intake on 29 October. First inspection was originally scheduled for 03 November but was rescheduled twice due to inspector capacity in the parish. Inspection completed 11 November, fourteen days after the date of loss.

On inspection, the roof damage was as reported. However, water ingress over the intervening fortnight had caused secondary damage to the ceiling, electrical fittings, and the hardwood flooring in two rooms. The reserve was revised upward materially to reflect this. Insured had attempted basic mitigation (tarpaulin) but supplies were not available locally during the first week post-event.

Settlement is in progress. Insured cooperative; supporting documentation provided promptly. Adjuster note: this is a clear example of damage compounding due to delayed inspection. The original loss, had it been inspected within 72 hours, would likely have been settled at or near the original reserve.

Adjuster Assessment

Coverage clear. Reserve revision driven by secondary damage during the inspection delay. Approximately JMD 1.7M of the current exposure represents damage that was not present at the original date of loss. This pattern is recurring across the Melissa portfolio.

Disposition

Open. Final settlement projected mid-January 2026.

CASE FILE — CL-2025-008902

Personal property — wind only — Hanover (Melissa)

CLAIM ID	CL-2025-008902	**POLICY**	GKGI-PROP-00388922
DATE OF LOSS	28 October 2025	**DATE REPORTED**	30 October 2025
PERIL	Hurricane — wind	**LINE**	Personal Property
LOCATION	Lucea, Hanover	**ASSIGNED ADJUSTER**	M. Bennett (Senior)
INITIAL RESERVE	JMD 1,400,000	**STATUS**	Closed — 36 days
FINAL SETTLEMENT	JMD 1,366,200	**INSPECTION DATE**	03 November 2025

Narrative Summary

Wind damage to roofing and exterior wall; minor interior damage. Inspection within six days. Insured had effective mitigation in place — tarpaulin and interior coverings — limiting secondary loss.

Settlement processed within 36 days, somewhat above standard SLA but within Melissa-period operating tolerances.

Adjuster Assessment

Coverage clear. Settlement near reserve. Insured's mitigation effective.

Disposition

Settled at JMD 1,366,200. File closed 03 December 2025.

CASE FILE — CL-2025-009188

Personal property — wind, water, and content — Westmoreland (Melissa)

CLAIM ID	CL-2025-009188	**POLICY**	GKGI-PROP-00501288
DATE OF LOSS	28 October 2025	**DATE REPORTED**	01 November 2025
PERIL	Hurricane — wind and flood	**LINE**	Personal Property — All Risks
LOCATION	Negril, Westmoreland	**ASSIGNED ADJUSTER**	D. Reid
INITIAL RESERVE	JMD 3,200,000	**STATUS**	Open — 48 days
CURRENT EXPOSURE	JMD 5,800,000 (revised)	**INSPECTION DATE**	18 November 2025

Narrative Summary

Significant property loss including partial roof failure and contents damage. First inspection 21 days post-event due to access issues and inspector backlog. Insured had limited ability to mitigate independently — the roof was structurally compromised and required engineering review before any temporary repair could be attempted.

During the inspection delay, prolonged exposure to weather caused mold development across approximately 60% of interior wall surfaces and saturated structural elements. The settlement now includes mold remediation, structural drying, and replacement of items that were initially salvageable but became total losses during the delay.

Adjuster note: insured contacted the call centre four times during the inspection wait; we have logged this as a service-recovery exception.

Adjuster Assessment

Coverage clear. The increase from initial reserve to current exposure (~JMD 2.6M) is almost entirely driven by mold and secondary moisture damage that developed during the inspection wait. Recommend file reviewer flag for portfolio aggregation analysis.

Disposition

Open. Final settlement projected late January 2026.

CASE FILE — CL-2025-009244

Commercial property — wind & business interruption — St. James (Melissa)

CLAIM ID	CL-2025-009244	**POLICY**	GKGI-CPROP-00188441
DATE OF LOSS	28 October 2025	**DATE REPORTED**	29 October 2025
PERIL	Hurricane — wind, with consequential BI	**LINE**	Commercial Property — Combined
LOCATION	Montego Bay, St. James	**ASSIGNED ADJUSTER**	P. Forbes (Senior)
INITIAL RESERVE	JMD 14,000,000	**STATUS**	Open — 51 days
CURRENT EXPOSURE	JMD 18,200,000	**INSPECTION DATE**	02 November 2025

Narrative Summary

Insured operates a mid-sized hospitality property. Damage to roofing of the main building and one of the guest wings; partial interior water damage. Inspection within five days, which is fast for the period — reflects the file size and the dedicated reservation of senior capacity for commercial losses above JMD 5M.

Settlement complicated by business interruption (BI) calculation. Insured's revenue records pre-event are clean and well-organized. BI assessment ongoing with the forensic accounting team. Adjuster has communicated weekly with insured's broker; no escalations.

Adjuster Assessment

Coverage clear on physical damage. BI is the larger exposure and is being worked separately. File is on track for January settlement on the property side; BI may extend.

Disposition

Open. Property settlement targeted late January 2026; BI separate.

CASE FILE — CL-2025-009388

Personal property — minor wind — Trelawny (Melissa)

CLAIM ID	CL-2025-009388	**POLICY**	GKGI-PROP-00599012
DATE OF LOSS	28 October 2025	**DATE REPORTED**	02 November 2025
PERIL	Hurricane — wind (minor)	**LINE**	Personal Property
LOCATION	Falmouth, Trelawny	**ASSIGNED ADJUSTER**	D. Reid
INITIAL RESERVE	JMD 380,000	**STATUS**	Closed — 41 days
FINAL SETTLEMENT	JMD 0	**INSPECTION DATE**	24 November 2025

Narrative Summary

Insured reported minor roofing damage. Inspection delayed to 24 November (27 days post-event) due to volume in the parish. On inspection, no covered damage was identified — the issue reported was pre-existing wear, with no clear evidence of wind impact at the date of loss.

Insured was disappointed with the outcome; expressed view that "if you had come earlier you would have seen the damage." Adjuster reviewed photographs the insured had taken on 30 October — these support the original report but the structural pattern observed at inspection was consistent with chronic deterioration rather than acute event damage.

Adjuster Assessment

Coverage decision: declined. The decision is defensible on the technical evidence. The file is noted, however, because the late inspection did affect our ability to assess at the time of loss, and the insured's contemporaneous photographs are not conclusive.

Disposition

Closed without settlement. Insured advised of right to dispute.

CASE FILE — CL-2025-009501

Personal property — wind & secondary mold — Manchester (Melissa)

CLAIM ID	CL-2025-009501	**POLICY**	GKGI-PROP-00322188
DATE OF LOSS	28 October 2025	**DATE REPORTED**	04 November 2025
PERIL	Hurricane — wind, with secondary water	**LINE**	Personal Property — All Risks
LOCATION	Christiana, Manchester	**ASSIGNED ADJUSTER**	M. Bennett (Senior)
INITIAL RESERVE	JMD 920,000	**STATUS**	Open — 45 days
CURRENT EXPOSURE	JMD 2,150,000	**INSPECTION DATE**	20 November 2025

Narrative Summary

Insured reported wind damage to roofing on 04 November (reporting delay attributable to communications outage in the parish). Inspection scheduled 16 days after report. By inspection, secondary water and mold damage had developed in two rooms.

Insured cooperative and visibly distressed by the condition of the property. Mitigation supplies (tarpaulin, dehumidifier rental) were not available locally for the first ten days post-event.

Adjuster Assessment

Coverage clear. Secondary damage drives ~JMD 1.2M of current exposure. The pattern (small initial loss, large secondary loss due to delay and supply shortages) is the dominant pattern in this section of the portfolio.

Disposition

Open. Final settlement projected late January 2026.

Section 3 — Selected Cases Illustrating Recurring Patterns

The cases below were selected by the senior adjuster team because they illustrate patterns recurring across the broader Melissa-affected book. They are not the largest claims by settlement amount; they are the cases that, in aggregate, tell the story of where the loss experience is being shaped.

CASE FILE — CL-2025-009711

Personal property — initial minor loss, major secondary — St. Elizabeth

CLAIM ID	CL-2025-009711	**POLICY**	GKGI-PROP-00488112
DATE OF LOSS	28 October 2025	**DATE REPORTED**	30 October 2025
PERIL	Hurricane — wind, secondary water	**LINE**	Personal Property
LOCATION	Junction, St. Elizabeth	**ASSIGNED ADJUSTER**	D. Reid
INITIAL RESERVE	JMD 280,000	**STATUS**	Open — 49 days
CURRENT EXPOSURE	JMD 1,950,000	**INSPECTION DATE**	23 November 2025

Narrative Summary

The original loss was a small section of damaged roofing — initial reserve was set at JMD 280,000 based on the insured's verbal description and photographs. Inspection occurred 26 days after the date of loss. By that time, the damaged area had allowed sustained water ingress through every subsequent rain event, and the resulting damage to the interior had become extensive.

The current exposure is approximately seven times the original reserve. The insured is elderly, lives alone, and was unable to mitigate independently. A relative attempted to install a tarpaulin on day three but it was inadequately secured and detached during the next storm.

Adjuster Assessment

Coverage clear. This case is being included in the senior reviewer set as an exemplar of the "small loss, large delay, large settlement" pattern. If the file had been inspected within 72–96 hours, the settlement would likely have been at or near the original reserve. The 7x ratio is among the highest we have seen in this period but the directional pattern is consistent across the book.

Disposition

Open. Settlement target end of January 2026.

CASE FILE — CL-2025-009842

Personal property — declined — possible pre-existing — Westmoreland

CLAIM ID	CL-2025-009842	**POLICY**	GKGI-PROP-00388491

DATE OF LOSS	28 October 2025	**DATE REPORTED**	08 November 2025
PERIL	Reported as hurricane wind	**LINE**	Personal Property
LOCATION	Savanna-la-Mar, Westmoreland	**ASSIGNED ADJUSTER**	P. Forbes (Senior)
INITIAL RESERVE	JMD 1,200,000	**STATUS**	Closed — 38 days
FINAL SETTLEMENT	JMD 0	**INSPECTION DATE**	02 December 2025

Narrative Summary

Reported damage included roof leaks and ceiling staining. Inspection 35 days post-event. The pattern of staining and the condition of the roof underlay both indicate the issue substantially predates the event. No structural evidence of acute wind damage; no displaced fasteners or tile uplift consistent with hurricane-force winds at this location.

Coverage decision was reviewed by senior adjuster and by the technical referent. The decision to decline was unanimous on technical grounds.

Insured has indicated they will dispute the decision via a public adjuster. File has been flagged for litigation reserve.

Adjuster Assessment

Decline is technically defensible. The file is noted because the late inspection makes the assessment harder to defend in the court of public opinion, even where it is correct on the merits. Recommend portfolio review of all declined Melissa claims to ensure consistent technical standard.

Disposition

Closed without settlement. Litigation reserve flagged.

CASE FILE — CL-2025-009998

Commercial property — straightforward, fast settlement — Kingston

CLAIM ID	CL-2025-009998	**POLICY**	GKGI-CPROP-00488112
DATE OF LOSS	28 October 2025	**DATE REPORTED**	28 October 2025
PERIL	Hurricane — wind	**LINE**	Commercial Property
LOCATION	New Kingston	**ASSIGNED ADJUSTER**	M. Bennett (Senior)
INITIAL RESERVE	JMD 6,800,000	**STATUS**	Closed — 34 days
FINAL SETTLEMENT	JMD 6,624,500	**INSPECTION DATE**	30 October 2025

Narrative Summary

Insured commercial policyholder reported the loss the same day. Inspection within 48 hours due to commercial-priority routing. Damage as reported; settlement processed within 34 days.

Counter-example to the "delay drives compounding loss" pattern. Where access permitted, where mitigation was professional, and where inspection was prompt, the file closed cleanly at the reserve. The contrast is part of why the pattern is worth attention.

Disposition

Settled at JMD 6,624,500. File closed 01 December 2025.

CASE FILE — CL-2025-010122

Personal motor — flood-damaged vehicle — St. Elizabeth (Melissa)

CLAIM ID	CL-2025-010122	**POLICY**	GKGI-MTR-00688322
DATE OF LOSS	28 October 2025	**DATE REPORTED**	03 November 2025
PERIL	Flood inundation	**LINE**	Personal Motor — Comprehensive
LOCATION	Black River, St. Elizabeth	**ASSIGNED ADJUSTER**	D. Reid
INITIAL RESERVE	JMD 1,250,000	**STATUS**	Closed — 39 days
FINAL SETTLEMENT	JMD 1,150,000	**INSPECTION DATE**	14 November 2025

Narrative Summary

Vehicle inundated to dashboard level. Engine, electrical system, and interior all compromised. Vehicle declared a total loss after inspection. Settlement at agreed value less excess.

Disposition

Total loss settled at JMD 1,150,000. File closed 12 December 2025.

CASE FILE — CL-2025-010255

Personal property — insured at scale, well-mitigated — St. James

CLAIM ID	CL-2025-010255	**POLICY**	GKGI-PROP-00701288
DATE OF LOSS	28 October 2025	**DATE REPORTED**	29 October 2025
PERIL	Hurricane — wind	**LINE**	Personal Property
LOCATION	Rose Hall, St. James	**ASSIGNED ADJUSTER**	P. Forbes (Senior)
INITIAL RESERVE	JMD 980,000	**STATUS**	Closed — 28 days
FINAL SETTLEMENT	JMD 942,300	**INSPECTION DATE**	03 November 2025

Narrative Summary

Property had been professionally storm-prepared in the days before the event — windows shuttered, exterior items secured, secondary drainage cleared. Damage was contained to roofing of an outbuilding and one external wall. Inspection within six days; settlement within 28 days.

Insured shared their pre-event preparation routine with the adjuster, which is being collated for a customer education campaign in 2026.

Adjuster Assessment

Outcome substantially better than typical for the period because of insured-side preparation.

Disposition

Settled at JMD 942,300. File closed 25 November 2025.

Section 4 — Senior Adjuster Commentary

The two senior adjusters running point on the Melissa portfolio (P. Forbes and M. Bennett) were asked to write a short commentary summarizing what they have seen across the cases they have personally worked. Their commentaries are reproduced below in their own voice. They are not edited beyond pseudonymizing references to specific policyholders.

Commentary by P. Forbes, Senior Adjuster

I have worked claims in Jamaica for nineteen years and the Melissa portfolio is not the largest event book of my career — Ivan was larger by a wide margin — but it has the most distinctive shape of any I have seen. The shape is this. We had a large number of small-to-medium losses where the original event damage, taken on its own, would have settled within normal SLA at or near reserve. Instead, a meaningful share of those files have settled, or will settle, at multiples of their initial reserve. The reason is the gap between the date of loss and the date of inspection.

In a typical year we inspect within 72 hours for property of any size and within 96 hours for routine motor. For the first three weeks after Melissa we were inspecting at days fourteen through twenty-five for non-commercial property in the affected parishes. During that window, several things happened concurrently. Insureds without the means or supplies to mitigate independently lost the ability to stop secondary damage. Mold conditions developed in interior walls. Saturated wood deteriorated. Salvageable contents became unsalvageable. Where the file would have closed at JMD 300,000 or 500,000 with prompt inspection and a clear settlement instruction, it now sits at JMD 1.5M or 2M with mold remediation, structural drying, and contents replacement.

A second pattern is in the disputed-decline files. Where we have legitimately declined a claim because the technical evidence at the time of inspection does not support coverage — where, for example, the staining or wear pattern is inconsistent with an acute event — our decision is harder to defend with an inspection forty days after the date of loss than it would be with one within a week. The decision is right. The optics are not.

My recommendation, written here for the file and not as policy advice, is that the next event-season planning conversation should start not with reinsurance program structure but with adjuster surge capacity. We have the contractual coverage we need. We do not, in this event, have had the operational capacity to inspect at the speed that minimizes the loss.

Commentary by M. Bennett, Senior Adjuster

I will keep mine shorter. P. Forbes has covered the operational pattern. I want to add one thing about the customer side.

In the cases I worked, the insureds who fared best were not the ones with the largest sums insured. They were the ones who had storm-prepared in a serious way — shutters, cleared drainage, secured exterior items, advance contact with their broker. We had several commercial files of this profile that settled within thirty days at very near reserve. We had personal-line files of this profile that settled in three weeks. The pattern crossed income levels.

I think there is a customer education conversation here that the company has historically left to brokers and to public communications campaigns. It would be worth GKGI taking a more direct role. Not because it changes our exposure on day one — it does not — but because it changes the loss curve materially when an event arrives. The 2026 hurricane season is the immediate horizon for that work.

Both observations — the surge capacity issue and the customer preparation issue — appear in different ways across the case files included in this compilation. They are not visible from the structured claims data alone. They are why we still write narratives.

Section 5 — Compilation Summary

The twenty cases in this compilation, drawn from approximately 4,200 files worked in FY2025, are not statistically representative of the full book. They are clinically representative — meaning they capture the major patterns the senior adjuster team has identified as material for portfolio-level review and for the FY2026 planning conversation.

Three observations stand out across the compilation.

One. The post-Melissa surge produced a meaningful share of files where the secondary damage exceeded the primary damage. The driver was the gap between the date of loss and the date of inspection. This is not a coverage issue, an underwriting issue, or a fraud issue. It is an operational capacity issue, and it shapes the loss experience materially.

Two. Insured-side mitigation makes a substantial difference to the eventual loss. This is not new information in the abstract. What is new in this event is the spread between well-prepared and unprepared insureds, which appears wider than in previous events. Customer education is a candidate intervention.

Three. A handful of disputed declines are pending. The technical merit of the declines is sound. The optics are made harder by the timing of inspection. This is worth flagging in advance of any external commentary on the company's handling of the event.

This compilation is intended as a narrative complement to the FY2025 claims dashboards and the standard portfolio review pack. It is not a substitute for either. It exists because the dashboards measure outcomes; the narratives sometimes contain the reasons.
