

Strategic Decision-Making & Executive Alignment

From Individual Decision to Enterprise Alignment

GKFG DATA-DRIVEN DECISION-MAKING PROGRAM | SESSION 3 OF 3

Where We've Been — The Arc

1

Session 1 — See

Built the executive lens; learned to interrogate a dashboard

2

Session 2 — Decide

Moved from observation to choice under uncertainty

3

Session 3 — Align

Today: from individual decision to enterprise commitment

"The hardest data work in this room isn't analysis — it's alignment."

What You'll Leave With Today

1

Scenario Planning

A structured way to plan under competing priorities — scenarios, not just forecasts

2

Board-Ready Narrative

The Insight / So-What / Now-What frame you can start using immediately

3

Data Dependency Map

A map of the cross-functional data dependencies you personally own

4

Written Commitments

Three public, verifiable commitments to leading with data going forward

Session 3 Outcomes

1 Run a structured scenario-planning exercise

Applied to a strategic decision involving competing priorities

2 Map cross-functional data dependencies

Between your function and at least two other GKFG functions

3 Translate analysis into board-ready narrative

Without losing analytical integrity

4 Articulate three data-leadership commitments

In writing — specific, verifiable, and owned

5 Identify a cross-SBU data integration opportunity

Worth escalating after the program

Today's Agenda at a Glance

Module 11

Scenario Planning at Executive Altitude

Module 12

Strategic Simulation — "GKFG 2030: The Allocation Decision"

Module 13

Executive Communication & Boardroom Storytelling

Module 14

Executive Presentation Lab

Module 15

Enterprise Alignment Map

Module 16

The Data-Driven Leadership Pledge

Scenario Planning at Executive Altitude

Forecast

"What is most likely to happen?" — A point estimate of the future based on current trends.

Scenario

"What should we do if the world bends a different way?" — A set of structured, divergent futures.

The Executive Imbalance

It can be easy to over-rely on forecasts and under-use scenarios. Forecasts are precise but brittle. Scenarios are expansive and strategic.

Today's session rebalances this — giving you both the lens and the practice.

When to Use Scenarios Instead of Forecasts

High External Uncertainty

Macro shifts, regulatory changes, climate events — when the range of futures is wide

Hard-to-Reverse Decisions

Capital commitments, market entries, structural changes — when walking back is costly

Multi-Stakeholder Trade-offs

When a single point estimate flattens real competing interests across the organization

Decision Pathways — Anatomy of a Strategic Choice

The Decision

What exactly are we choosing between? Name the options with precision.

The Triggers

What evidence would move the decision? Define the data signals in advance.

The Trade-offs

Growth vs. risk vs. compliance vs. stakeholder obligation — name the weights.

The Reversibility

Can we walk this back — and at what cost? Reversibility changes the risk calculus entirely.

The Four Competing Priorities

Growth

Revenue, market share, new geographies

Risk

Credit, market, catastrophe, operational

Compliance

AML, sanctions, prudential obligations

Stakeholder Obligation

Customers, communities, employees, shareholders

Key strategic decision-making is very often some **weighted blend** of these four. **Naming the weights is leadership work.**

The "Three Assumptions" Carry-Over

From Session 2

Every model rests on two or three assumptions that, if moved, change the recommendation entirely.

In scenario planning, those assumptions become the **axes** of your scenarios — not inputs, but the defining variables that separate one possible future from another.

The Sharper Question

"What two assumptions, if they bend, change my allocation?"

Carry this question into the simulation. If you can name the axes, you can build the scenarios.

Bridge to the Simulation

You now have the lens.

In this next exercise, you will use it on a real GKFG strategic choice.

 **Decision prompt:** *"Where would you place GKFG's strategic capacity for the next 24 months?"*

GKFG 2030: The Allocation Decision — Simulation Setup

Your Role

Each table = the GKFG ExCo

Your Resource

100 units of strategic capacity: capital + leadership
attention + IT delivery throughput

Your Horizon

From planning to implementation by 2030

Three Rounds

Allocate

The Seven Strategic Options

- Accelerate **GK One expansion** — Cayman, Guyana, Trinidad & Tobago
- Deepen the **GKGI–ScotiaProtect partnership** across the Caribbean
- Expand **FGB lending** in the post-Melissa rebuild context (with risk controls)
- Invest in **unified customer data** across SBUs to drive cross-affiliation revenue
- Build next-generation **risk and AML analytics** capability
- **Modernize branch operations** and shift transaction mix toward digital
- Strengthen **workforce, leadership pipeline, and retention**

Round 1 — Allocate

30 min

Distribute

Allocate your 100 units across the seven strategic options (or add a different strategic option)

Justify

Document briefly: what data-driven reasoning justifies your allocation?

Acknowledge

What did you starve — and on what evidence?

GKFG 2030: The Allocation Decision — Simulation Setup

Your Role Each table = the GKFG ExCo	Your Resource 100 units of strategic capacity: capital + leadership attention + IT delivery throughput
Your Horizon From planning to implementation by 2030	Three Rounds Allocate → React to Curveball

Round 2 — The Curveball

30 Minutes to Reallocate

A regulatory change, hurricane, competitor move, or operational incident has just landed. Reallocate your units.

"Did your conviction survive contact with new information — and should it have?"

GKFG 2030: The Allocation Decision — Simulation Setup

Your Role Each table = the GKFG ExCo	Your Resource 100 units of strategic capacity: capital + leadership attention + IT delivery throughput
Your Horizon From planning to implementation by 2030	Three Rounds Allocate → React to Curveball → Present

Bridge to Communication

You've made the decision.

The next test is harder: can you sell it to a board in 90 seconds without losing the analytical integrity that justified it?

📌 That is exactly what Module 13 is designed to develop.

Executive Communication — The Two Ways Presentations Fail

Too Much Data, No Narrative

The room drowns. Attention fragments. The critical recommendation disappears inside a sea of charts.

Strong Narrative, No Defensible Data

The room loses trust. The story is compelling, but it cannot survive the first hard question.

Today: **one frame that solves both.**

The Insight / So-What / Now-What Frame

Insight

What does the data clearly show?

One sentence. No jargon. No defensiveness.

So-What

Why does it matter to this audience?

Revenue, risk, customer, strategic position.

Now-What

What decision are you asking for today?

Specific. Time-bound. Owned.

 This is the most portable artifact in the program. Learn to build it from memory — you will use it every week.

Worked Example — GK One Adoption Gap

Insight

GK One adoption in Guyana has plateaued at 31% of FGB transacting customers, versus 42% in Jamaica.

So-What

Closing that gap unlocks transaction revenue, reduces per-transaction servicing cost, and closes a competitive window before new entrants arrive.

Now-What

Approve a 90-day Guyana adoption push — targeted in-app onboarding, three branch-led activation events, weekly review against a 38% target. **Decision needed today.**

What Each Layer Demands of You

Insight Demands Discipline

Resist the second sentence. The compulsion to explain, qualify, and defend is the enemy of clarity.

So-What Demands Empathy

Know what your board cares about. Connect your finding to their mandate, not yours.

Now-What Demands Courage

Name the decision. Name the date. Name who owns it. Ambiguity here is a failure of leadership.

Common Failure Modes

"Insight-Only" Presentations

The chart speaks, the leader doesn't. Data is presented but never interpreted. The board is left to draw its own conclusions — and often draws the wrong ones.

"So-What Inflation"

Every finding is labeled strategic. None truly are. When everything is critical, nothing is. Credibility erodes with each over-inflated claim.

"Now-What Vagueness"

"We should consider exploring options" is not a Now-What. It is a postponement disguised as a recommendation. Name the decision or don't call it one.

Round 3 — Present

45 min

Your Delivery

Each table presents their **final allocation** with reasoning.

Make the case: what did you prioritize, what did you trade away, and what would change your mind?

The Feedback Protocol

Other tables ask **questions**.

-  Focus questions on **assumptions**, not the numbers themselves. The numbers follow from the assumptions.

Deliver It as a Board Briefing

Prepare a **90-second** board-style delivery using the Insight / So-What / Now-What frame and the provided deck template.

The constraint is the discipline. 90 seconds forces you to prioritize what actually matters.

Peer Feedback Prompts

1

Did the Insight fit in one sentence?

If it took two or three sentences, the analysis is not yet complete — or the presenter isn't confident in it.

2

Did the So-What connect to this audience's stakes?

Not the presenter's priorities — the board's. Revenue, risk, customers, strategic position.

3

Could you act on the Now-What immediately?

If the answer is no, the Now-What is not yet specific enough. Push for the name, the date, the decision.

Simulation Debrief — Where Did the Room Converge and Diverge?

**SHARED
BELIEF OR
SHARED
BLIND SPOT**

**GENUINE
STRATEGIC
AMBIGUITY**

What the Pattern Reveals

Convergence reveals shared belief — or a shared blind spot worth interrogating.

Divergence reveals genuine strategic ambiguity that deserves explicit board attention, not resolution by majority vote.

This is how an ExCo should sound: structured disagreement, transparent assumptions.

The Org Chart Is Not the Data Map

The Org Chart

Shows who reports to whom. A hierarchy of accountability and authority.

The Data Map

Shows who needs *what data* from whom — and whether they are actually getting it.

These are different maps. Most organizations only have one.

The Enterprise Alignment Map — The Grid

Function	Banking	Insurance	Money Services	Risk	Technology
Banking	—	●	✓	●	?
Insurance	●	—	?	✓	●
Money Services	✓	?	—	●	?
Compliance	✓	✓	✓	✓	●

In each off-diagonal cell: *"What does this function need from that function to make better decisions — and are they getting it?"*
✓ Getting it ● Partial ? Not getting it ? Unsure

Table Exercise — Build Your Map

Instructions

30 minutes: Each table fills the grid as honestly as they can.

Mark each cross-functional cell using the four indicators.

Focus less on completeness — more on **truthfulness**.

The goal is not a perfect map. The goal is an honest one.

The Four Indicators

- ✓ **Getting it** — data flows reliably and is used
- ◐ **Partial** — some data flows, gaps remain
- ? **Not getting it** — the need exists, the flow does not
- ? **Unsure** — we don't know what we don't know

Surfacing the Gaps

1

Which gaps are largest?

Size matters — but strategic significance matters more. A small gap in a critical decision chain is more dangerous than a large gap in a low-stakes process.

2

Which are easiest to close?

Some gaps require infrastructure. Others require only a conversation. Quick wins build momentum and trust.

3

Who owns the next move?

A gap without an owner is a permanent gap. Name the person before leaving this room.

AI DEMO

Copilot Researcher Agent — Closing the Arc

Session 1

Single hypothesis-driven question — Analyst mode

1

2

3

Session 3

Full multi-section strategic synthesis — Researcher mode

Session 2

Iterative analytical conversation — Analyst mode,
extended

AI synthesis is a **strong starting point** and a **poor finishing point**. The distance between the two is where your judgment lives.

Live Demo Setup

The Board Question Posed to the Researcher Agent

"What are the most material strategic risks and opportunities facing GKFG over the next 24 months given the macro environment, competitive moves in Caribbean digital banking, and our current portfolio mix?"

The Demo Sequence — What to Watch

Run the Question

Show the multi-section synthesis as it emerges in real time

Critique with the Room

What did it get right? What did it miss?
Where is source quality strong — and where is it thin?

Name What the Agent Cannot Know

What would an actual GKFG executive know that the Researcher agent does not?

Demo Debrief — The Irreducible Executive Role

What AI Delivers

Structured synthesis at speed. Broad pattern recognition across large bodies of information.

What Remains Yours

Institutional knowledge, relationships, lived context, and judgment — irreducibly human.

The Real Gap

The gap is not the AI's analysis. The gap is the AI's **lack of institutional context** — it does not know your board, your history, your stakeholders, or your commitments.

 That context is not a data problem. It is a leadership asset — and it is yours to deploy.

MODULE 16

What Makes a Program Durable

Two weeks from now, most of what was said in this room will fade.
What endures is what you **wrote down, owned, and said out loud.**

That is what our final module is intended to address.

Your Pledge — Three Commitments

Commitment 1 — A Question I Will Start Asking

"..." — Specific. Directed at a real decision you own. Rooted in what you learned here.

Commitment 2 — A Behavior I Will Stop or Change

"..." — One concrete shift in how you engage with data, analysis, or your team's recommendations.

Commitment 3 — A Cross-Functional Dependency I Will Own

"..." — Drawn directly from your alignment map. Name the function. Name the gap. Own the next move.

Key Question: How can you leverage the various worksheets we used throughout our sessions going forward to help drive the See —> Decide —> Align framework?

The Pledge Moment

The public commitment is not ceremonial. Research consistently shows that stated, witnessed commitments are significantly more likely to be honored than private ones.

The 30-Day Return

Day 30

You review your original pledge. One question attached:
"How is this going?"

Day 90

Group/team review of the Enterprise Alignment Map gaps
— from conversation to organizational action

Day 60

Optional group reconnect — share one decision you
made differently because of this program

The Executive's Irreducible Work

Ask the Right Question

No algorithm surfaces the question that changes the frame. That judgment is yours.

Judge the Answer in Context

Data without context is noise. Your institutional knowledge is the context that makes data actionable.

Make the Call

No analyst, no dashboard, no AI agent can do this for you. That is the work.

"Thank you for the last twelve hours."

The program ends here.

The work has already started.

GKFG DATA-DRIVEN DECISION-MAKING PROGRAM

SESSION 3 OF 3
